eTwinning penetration (ratio eTwinners 2021 / population 2020)

# Šole

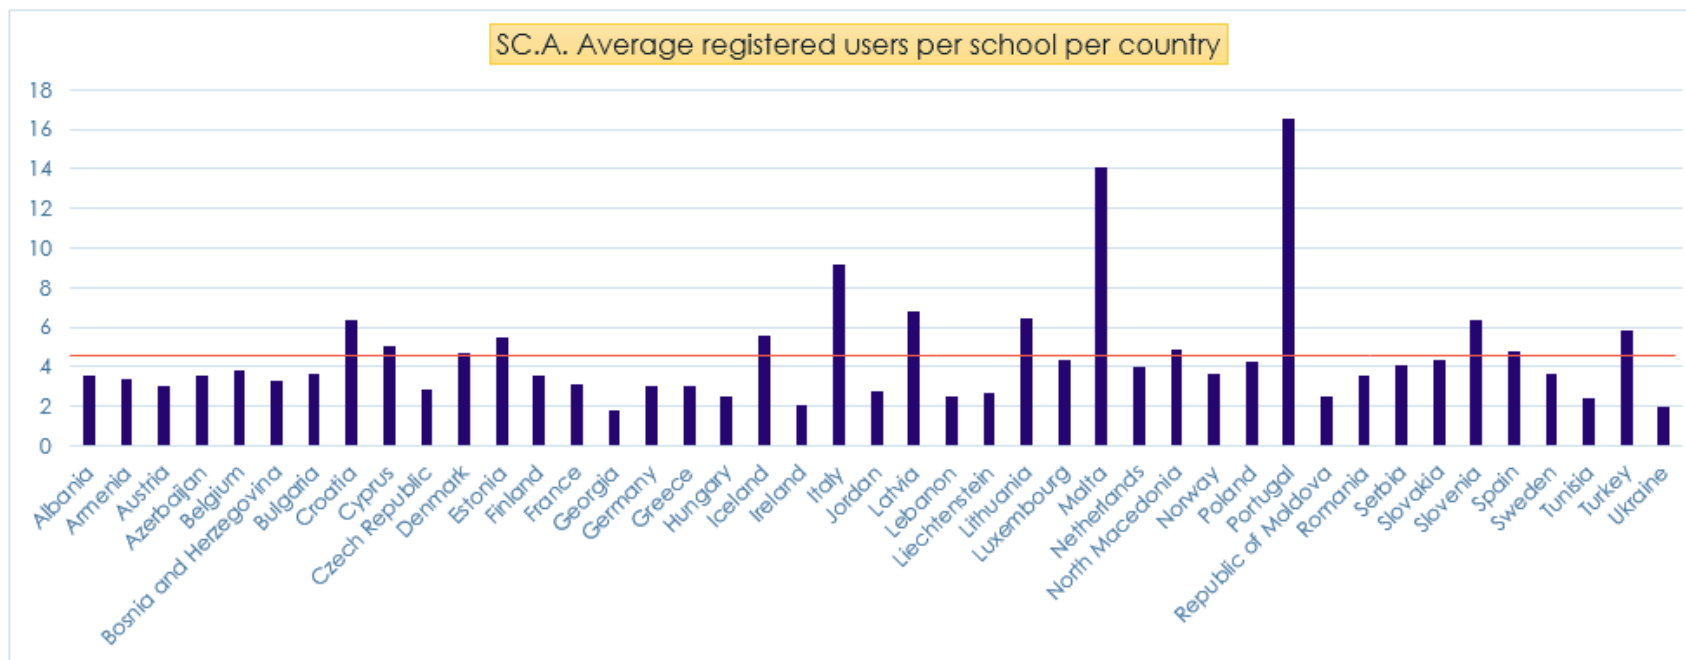

The pie shows the distribution of schools in eTwinning according to the International Standard Classification of Education (ISCED) level.

The information was gathered for the first time in 2018 by asking eTwinners to indicate the ISCED level of the school they teach in. As of 31.12.2021 a total of more than 743,000 records were submitted by eTwinners, which is a sound representation of the eTwinning population.

As one can see, there is a balanced distribution among the various main levels, considered the various combinations. NB: teachers could select up to two levels for each school, as indicated in the pie. Source: ISCED table in the annex.

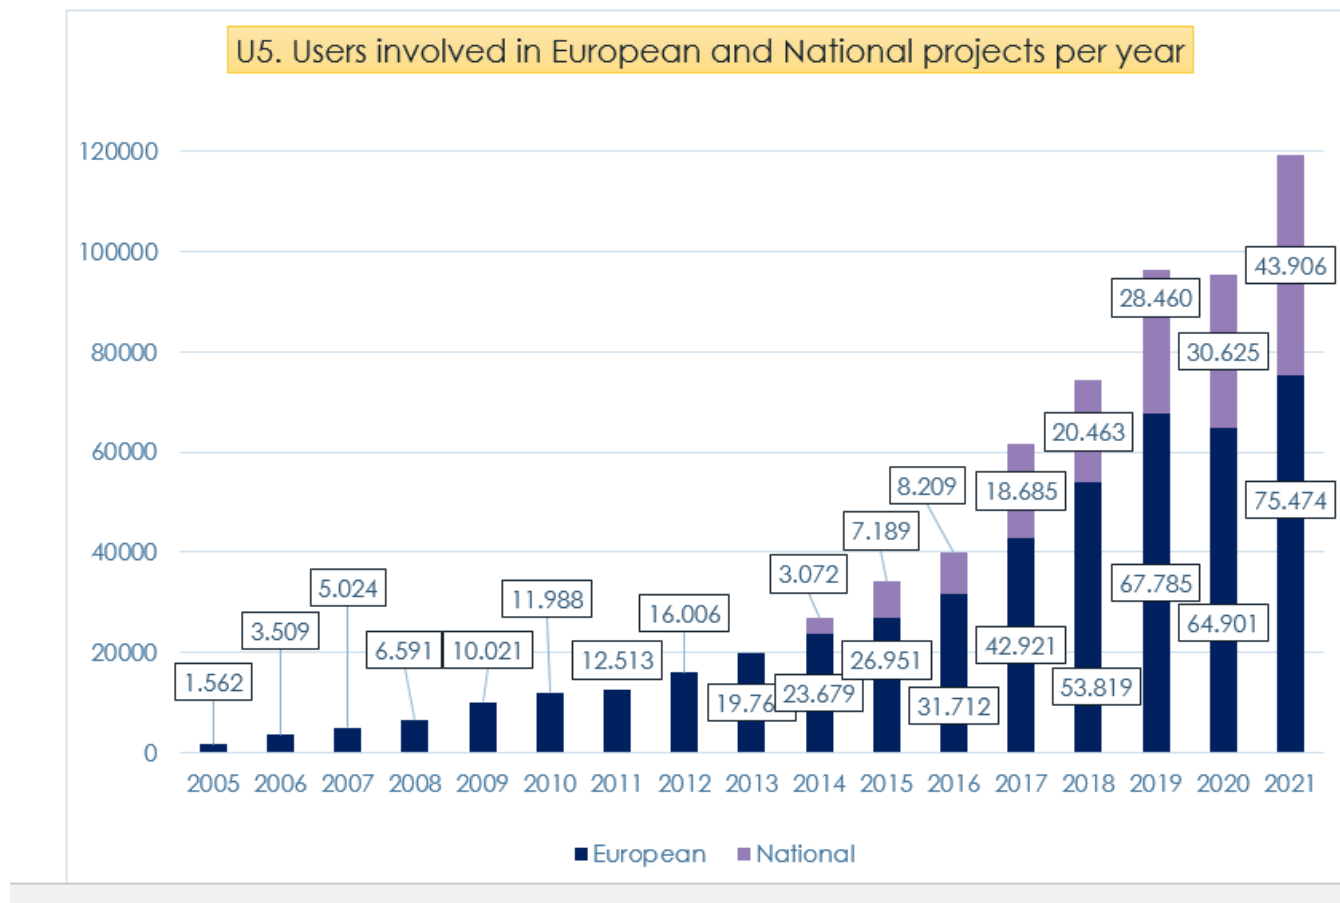

## Schools

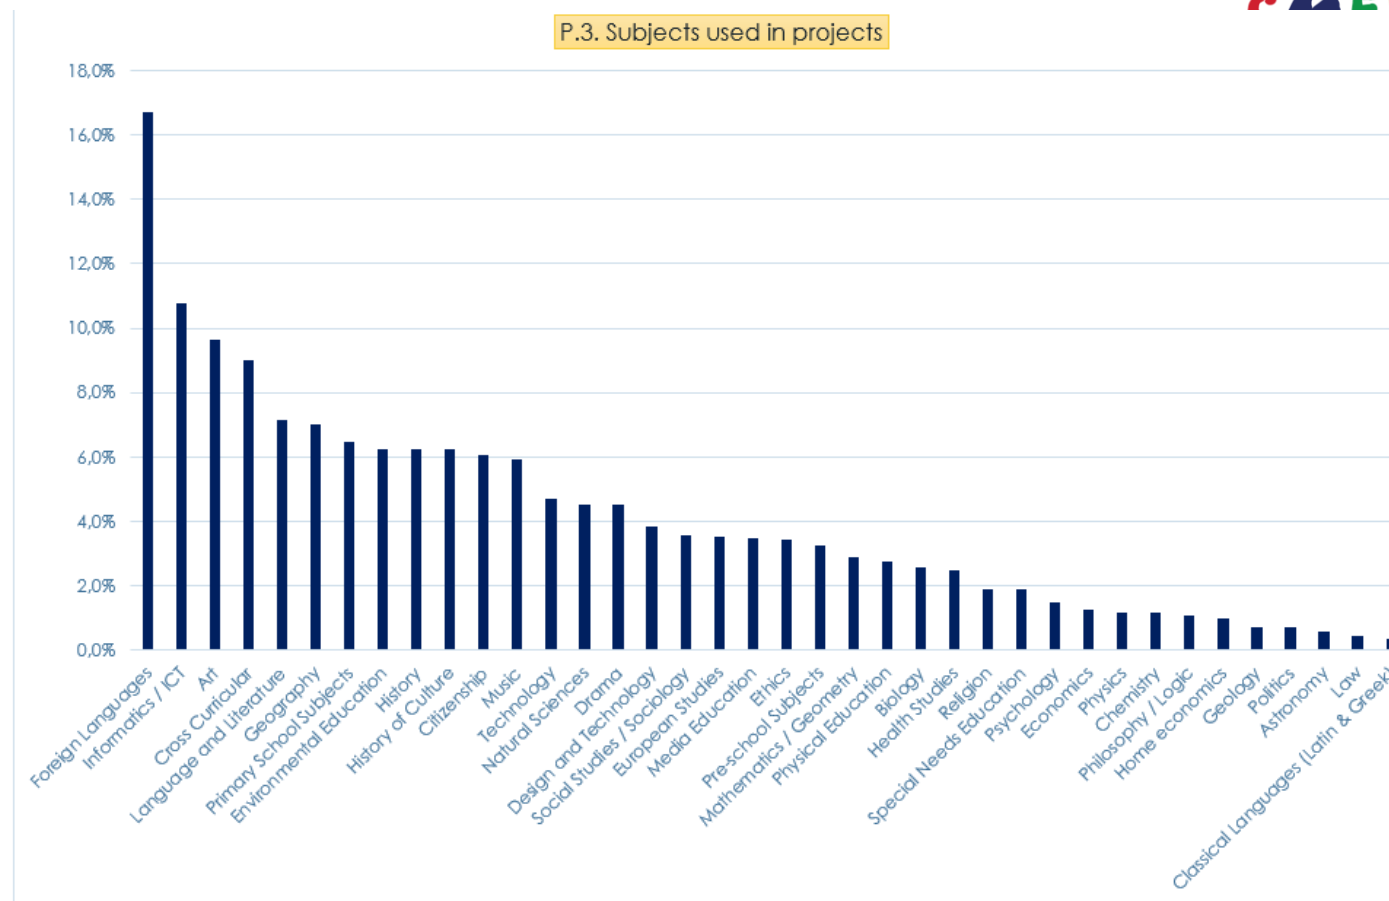

The chart shows the average number of users registered per each of the schools registered in eTwinning by country as of 31.12.2021. the overall figure is 4.4 users per school. It must be said that, for small countries, it is likely that most existing schools are registered in eTwinning. Countries with on average less than three users per schools are now very few, whereas countries with more than 4 users per schools on average are increasing, which is a sign that more and more uses are registering in existing schools.
